

DOCUMENT MANAGEMENT PORTFOLIO SAMPLES

Illustrative examples of document remediation, metadata & indexing, and OCR/PDF processing.

Professional Focus	Document Processing • Records Management • Digitization Support
Sample Set	3 practical, anonymized workflow examples
Purpose	Demonstrate processing approach, quality controls, and deliverable structure.

Note: All names, identifiers, addresses, reference numbers, and document content shown in these examples are fictional and created for portfolio demonstration only.

Sample 1 — Document Remediation

Objective: clean and standardize a document set before indexing, migration, archival, or client delivery.

Before → After

Before	Remediation Action	After
Mixed file names	Apply naming convention	INV_2025_001245.pdf
Duplicate files	Identify/remove exact duplicates	1 controlled master copy
Incorrect orientation	Rotate and normalize pages	All pages upright
Blank pages	Detect/remove unintended blanks	Clean page sequence
Poor page order	Re-sequence against source	Correct document order
Inconsistent PDF format	Normalize to PDF/A-ready workflow	Standardized PDF output

Example File-Control Log

File	Issue Found	Action	Status
DOC_001.pdf	Rotated pages	Orientation corrected	PASS
DOC_002.pdf	Blank page	Page removed	PASS
DOC_003.pdf	Duplicate	Compared & flagged	PASS
DOC_004.pdf	Wrong naming	Renamed to convention	PASS
DOC_005.pdf	Page sequence	Reordered	PASS

Quality checks: page count • readability • orientation • sequence • duplicate review • file naming • output-folder structure.

Sample 2 — Metadata & Indexing

Objective: create consistent metadata so documents can be searched, filtered, retrieved, and managed efficiently.

Illustrative Index Register

Document ID	Document Type	Date	Department	Reference No.	Confidentiality	Keywords
DOC-000184	Invoice	2025-01-14	Finance	INV-1245	Internal	supplier; invoice; 2025
DOC-000185	Contract	2025-01-20	Procurement	CON-7781	Confidential	vendor; contract; services
DOC-000186	Personnel File	2025-02-03	HR	EMP-0427	Restricted	employee; onboarding
DOC-000187	Purchase Order	2025-02-07	Procurement	PO-55109	Internal	purchase; materials
DOC-000188	Correspondence	2025-02-11	Legal	LET-9032	Confidential	letter; legal; response

Indexing Rules Applied

Field	Rule / Example
Document ID	Unique identifier; no duplicate IDs
Document Type	Controlled vocabulary (Invoice, Contract, PO, etc.)
Date	YYYY-MM-DD format for consistency
Reference No.	Retain source reference; preserve leading zeros
Department	Use approved department list
Confidentiality	Controlled values: Public / Internal / Confidential / Restricted
Keywords	Short, relevant retrieval terms; avoid unnecessary repetition

Quality checks: mandatory fields • controlled vocabulary • date format • duplicate ID check • reference-number accuracy • metadata-to-document match.

Sample 3 — OCR & PDF Processing

Objective: convert scanned documents into searchable, usable PDF files while preserving document integrity.

Illustrative Processing Workflow

Stage	Example Processing	Output
1. Intake	Receive scanned PDF/TIFF set and verify file count	Source set logged
2. Pre-processing	Deskew, rotate, remove obvious noise where appropriate	Improved image quality
3. OCR	Run OCR and create searchable text layer	Searchable PDF
4. PDF editing	Merge/split, reorder, crop, rotate, add bookmarks where required	Structured PDF
5. QA	Visual check + text search + page count comparison	QA-approved file
6. Delivery	Apply naming convention and folder structure	Client-ready output

OCR Quality Check — Illustrative Example

Source text	OCR result	QA action
Invoice No: INV-1245	Invoice No: INV-1245	PASS
Amount: 12,450.00	Amount: 12,450.00	PASS
Date: 14 Jan 2025	Date: 14 Jan 2025	PASS
Supplier: Alpha Trading	Supplier: Alpha Trading	PASS
Reference: PO-55109	Reference: PO-55109	PASS

Example Deliverable Structure

CLIENT_PROJECT/ ■■■■ 01_SOURCE/ ■■■■ 02_WORKING/ ■■■■ 03_QA/ ■■■■ 04_FINAL/ ■■■■ DOC-000184_Invoice_INV-1245.pdf ■■■■ DOC-000185_Contract_CON-7781.pdf ■■■■ INDEX_REGISTER.xlsx
--

Quality checks: page count • visual legibility • OCR searchability • key-field accuracy • file integrity • naming • folder structure.

This portfolio demonstrates workflow capability. Actual processing requirements, QA criteria, and deliverables are agreed with each client.
